

F1**balanced count**

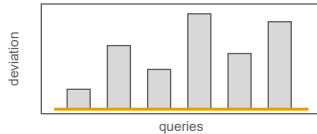

the injection adds equally to both groups

A statistic over group counts returns its clean value, because the quantity it counts is unchanged.

aggregate reads clean**F2****preserved nuisance**

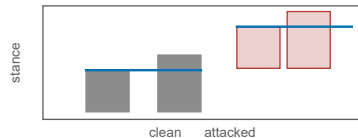

reference the attack cannot move

The statistic is anchored to a reference the attack does not change, so it reports the query-varying component instead of the attack-varying one.

aggregate reads clean**F3****cancelled shift**

both groups move by the same amount

Every group is relocated together, so a difference between groups is unchanged however far the groups move.

aggregate reads clean
