

F1 balanced count. The injection contributes equally to every group, so a counting statistic returns its clean value.

(a) F1, balanced count

F2 preserved nuisance. The statistic is anchored to a reference the attack leaves intact, so it reports query-conditioned variation instead.

(b) F2, preserved nuisance

F3 cancelled shift. All groups move together, so a difference between them is unchanged however far they move.

(c) F3, cancelled shift
